HS-LS30

Sodium Lauroyl Sarcosinate

INCI	CAS	EC	FAMILY	SUPPLIED AS
Sodium Lauroyl Sarcosinate	137-16-6	205-281-5	PC-01	Aqueous solution, 30% active

01 POSITIONING

The foam argument for the sulfate-free generation.

02 HOW IT WORKS

- 01 Amino-acid backbone

Sarcosine (from glycine) gives a biodegradable, mild anionic with a natural story.
- 02 Foam accelerator

Fixes the slow-foam weakness of glucoside-only systems.
- 03 Hard-water tolerance

Keeps foaming in high-hardness water where soaps precipitate.

03 APPLICATIONS

- Sulfate-free shampoos
- Facial foams and cleansers
- Shaving foams
- Toothpaste-grade systems (regional)
- Premium body washes

04 FORMULATION GUIDE

USE LEVEL	3–10%
-----------	-------

PH & CONDITIONS	Formulate pH 5–8; anionic below pH 4 loses solubility
-----------------	---

- Add early in the water phase; strong foamer — control vessel agitation.
- Synergizes with CAPB and glucosides for a complete sulfate-free architecture.

05 TYPICAL SPECIFICATION

Appearance	Clear to pale-yellow liquid
Active matter	~30%
pH (as is)	7.5–8.5

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE – DIRECTIONAL

Foam speed in sulfate-free base
+ 3–5% sarcosinate

Mildness (class data)
Sarcosinate

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
