HS MSH

Magnesium Sulfate (heptahydrate)

INCI	CAS	EC	FAMILY	SUPPLIED AS
Magnesium Sulfate (heptahydrate)	10034-99-8	231-298-2	PC-08	Granules, ≥99%

01 POSITIONING

A commodity salt with a specification — the difference between a stable W/O and a broken one.

02 HOW IT WORKS

- 01 W/O electrolyte lock

Dissolved in the internal water phase, Mg²⁺ ions lock water-in-oil emulsions against coalescence.
- 02 Osmotic soak

In bath salts, delivers the classic magnesium soak with high solubility.
- 03 Process aid

Salting-out and viscosity control in industrial and textile processes.

03 APPLICATIONS

- W/O creams and sunscreens
- Bath salts and soaks
- Textile and industrial processing
- Agriculture and micronutrient blends

04 FORMULATION GUIDE

USE LEVEL0.5–2% (W/O) · bulk in bath salts

PH & CONDITIONSNeutral; highly soluble

- Dissolve in the internal water phase of W/O systems before emulsifying.
- Store sealed — the heptahydrate is hygroscopic and can cake.

05 TYPICAL SPECIFICATION

AppearanceWhite crystalline granules

MgSO₄·7H₂O assay≥ 99%

Heavy metals≤ 10 ppm

Gradecosmetic / technical

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE — DIRECTIONAL

W/O stability contribution
With MgSO₄
