HS-SCI85

Sodium Cocoyl Isethionate

|                           |            |           |        |                                |
|---------------------------|------------|-----------|--------|--------------------------------|
| INCI                      | CAS        | EC        | FAMILY | SUPPLIED AS                    |
| Sodium Cocoyl Isethionate | 61789-32-0 | 263-052-5 | PC-01  | Powder / granules, ≥84% active |

01 POSITIONING

Premium bars are moving from saponification to syndet chemistry. This is the molecule they move to.

02 HOW IT WORKS

- 01 Mild anionic head

The isethionate ester head binds weakly to skin proteins — among the mildest anionics measured.
- 02 Solid-format engineering

Powder/needle formats compress into bars with controlled slough and crack resistance.
- 03 Skin-pH cleansing

Full performance at pH 5–6, where true soap fails.

03 APPLICATIONS

- Syndet and combo bars
- Facial cleansing bars and powders
- Shampoo bars
- Cream washes
- Baby bars

04 FORMULATION GUIDE

|                 |                    |
|-----------------|--------------------|
| USE LEVEL       | 10–50%             |
| PH & CONDITIONS | Optimal pH 4.5–7.5 |

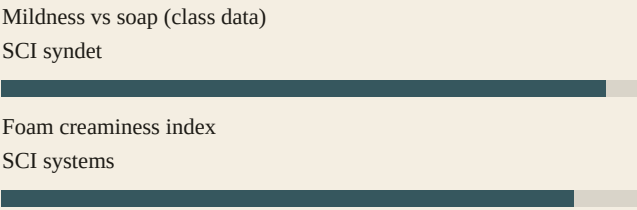

- For bars, blend with fatty acid binders at 60–75 °C and plod at controlled moisture.
- In liquids, pre-disperse hot; combine with betaine or taurate against recrystallization.

05 TYPICAL SPECIFICATION

|                    |                         |
|--------------------|-------------------------|
| Appearance         | White powder / granules |
| Active matter      | ≥ 80–85%                |
| Sodium isethionate | ≤ 10%                   |
| Moisture           | ≤ 5%                    |

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE — DIRECTIONAL

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
