HS-126N

Sodium Laureth Sulfate & Glycol Distearate & Cocamide DEA

INCI	CAS	EC	FAMILY	SUPPLIED AS
Sodium Laureth Sulfate & Glycol Distearate & Cocamide DEA	—	—	PC-01	Pearlized concentrate

01 POSITIONING

For the plant that buys process time, not just raw material.

02 HOW IT WORKS

- 01

Three functions, one drum

SLES cleans, glycol distearate crystallizes into pearl, CDEA stabilizes foam and body.
- 02

Cold-process ready

The pearl is pre-formed: dilution and perfume — no heating step, no crystallization risk.
- 03

Line simplification

Replaces three raw materials, three QC entries and one hot process with a single input.

03 APPLICATIONS

- Pearlized shampoos
- Body washes and hand soaps
- Contract-manufacturing lines
- Fast product launches

04 FORMULATION GUIDE

USE LEVEL	Dilute to 10–30% as supplied
PH & CONDITIONS	Adjust final pH 5.5–6.5
— Dilute in cold deionized water under slow stirring; add salt to final viscosity.	
— Perfume and preservative post-added; validate preservation of the diluted system.	

05 TYPICAL SPECIFICATION

Appearance	Pearlized white viscous liquid
Active matter	per TDS
pH (as is)	6–8

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE – DIRECTIONAL

Process time per batch	
Cold dilution of concentrate	
Energy per batch	
Cold process	

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
