HS 1501

Cyclopentasiloxane & Dimethiconol

INCI	CAS	EC	FAMILY	SUPPLIED AS
Cyclopentasiloxane & Dimethiconol	—	—	PC-02	Fluid blend

01 POSITIONING

The serum aisle runs on this system. Ours arrives with COA, drum after drum.

02 HOW IT WORKS

- 01 Gum without the gum problem

Ultra-high-MW dimethiconol is unmanageable pure; pre-dissolution makes it pumpable and dosable.
- 02 Targeted deposition

On drying, the gum concentrates at damage sites and split ends.
- 03 Instant sensory

Visible gloss and touchable smoothness from the first application.

03 APPLICATIONS

- Hair repair serums
- Anti-frizz finishers
- Leave-in creams
- Shine sprays

04 FORMULATION GUIDE

USE LEVEL	1–10%
PH & CONDITIONS	Inert; anhydrous or emulsified systems
— Cold-process only; do not shear excessively — the gum's molecular weight is the asset.	
— For sprays, dilute further with volatile silicone to application viscosity.	

05 TYPICAL SPECIFICATION

Appearance	Clear viscous fluid
Non-volatile content	per grade
Viscosity (25 °C)	per grade

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE – DIRECTIONAL

Split-end sealing (class data)

Dimethiconol serum systems

Shine uplift

Gum blend systems

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
