Coco-Glucoside & Glyceryl Oleate

INCI	CAS	EC	FAMILY	SUPPLIED AS
Coco-Glucoside & Glyceryl Oleate	—	—	PC-01	Aqueous liquid

01 POSITIONING

The step that turns a cleanser into a care product — one ingredient, both claims.

02 HOW IT WORKS

01 Cleansing + refatting

The glucoside fraction carries the cleansing; the glyceryl oleate deposits on skin during rinse, compensating lipid loss.

02 After-feel control

Reduces the tight, squeaky feel of surfactant systems — measurable in sensorial panels as improved smoothness.

03 Drop-in dosing

Added to the surfactant phase without process change; effective already at low percentages.

03 APPLICATIONS

- Shower oils and cream washes
- Intimate hygiene
- Baby cleansing
- Dry-skin and atopic-prone cleansers
- Premium sulfate-free systems

04 FORMULATION GUIDE

USE LEVEL 1–5%

PH & CONDITIONS Use pH 3.5–8

- Post-add at the end of the surfactant phase to protect the refatting fraction.
- Pairs with alkyl glucosides for fully non-ionic mild systems.

05 TYPICAL SPECIFICATION

Appearance Yellowish, slightly turbid liquid

Active matter ~65%

pH (20% solution) 11–12.5

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE — DIRECTIONAL

Skin lipid restitution after wash
With refatting glucoside · class data
