HS Copper Peptide

Copper Tripeptide-1

INCI	CAS	EC	FAMILY	SUPPLIED AS
Copper Tripeptide-1	—	—	PC-07	Powder / solution

01 POSITIONING

The highest-value gram in the catalogue — sequence-verified, cold-chain honest.

02 HOW IT WORKS

- 01

Biomimetic signaling

Short sequences mimic the body's own messengers, cueing matrix synthesis or relaxing expression tension.
- 02

Carrier delivery

Copper and biotinoyl conjugates ferry trace actives to their target sites.
- 03

Micro-dose potency

Effective at ppm levels — the actives with the highest value density in the index.

03 APPLICATIONS

- Anti-aging serums and eye creams
- Firming and lifting lines
- Hair-density and lash serums
- Post-procedure recovery

04 FORMULATION GUIDE

USE LEVEL	ppm–0.5% per peptide
PH & CONDITIONS	Formulate cool, pH 5–6.5; keep away from strong oxidizers and metals (unless the peptide is a metal complex)
— Add in the final cool-down; pre-dissolve in water or glycol at the exact micro-dose.	
— Protect with a chelant and antioxidant; validate stability at 40 °C before launch.	

05 TYPICAL SPECIFICATION

Appearance	White lyophilized powder / solution
Purity (HPLC)	per peptide, per TDS
Sequence identity	per COA

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE – DIRECTIONAL

Wrinkle-depth reduction over 8–12 wk (class data)
Signal-peptide systems

Value density (active per formula cost)
Peptides

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
