

PC-08 · PRESERVATIVES & CHELANTS · PERSONAL CARE

HS EDTA 2Na

Disodium EDTA

INCI	CAS	EC	FAMILY	SUPPLIED AS
Disodium EDTA	139-33-3	205-358-3	PC-08	Powder, ≥99%

01 POSITIONING

The 0.1% nobody markets and every stable formula depends on.

02 HOW IT WORKS

- 01

Metal sequestration

EDTA cages Ca, Mg, Fe and Cu ions, removing the catalysts of degradation.
- 02

Preservative boosting

By stripping the metals microbes need, it multiplies preservative efficacy.
- 03

Hard-water rescue

Prevents soap scum and surfactant precipitation in high-hardness water.

03 APPLICATIONS

- Virtually all aqueous personal care
- Shampoos and cleansers
- Household and laundry
- Industrial water treatment
- Preservative-boost systems

04 FORMULATION GUIDE

USE LEVEL	0.05–0.5%
PH & CONDITIONS	2Na grade dissolves pH > 4.5; 4Na is more soluble and alkaline

- Dissolve fully in the water phase before adding surfactants; 4Na for alkaline systems, 2Na for near-neutral.
- 0.1% is the workhorse dose — more rarely helps and can affect skin-feel.

05 TYPICAL SPECIFICATION

Appearance	White crystalline powder
Assay (chelation value)	≥ 99%
pH (1% solution)	2Na 4–6 / 4Na 10–11.5
Heavy metals	≤ 10 ppm

Typical parameters. The specification on the current TDS and the per-lot Certificate of Analysis govern.

06 PERFORMANCE — DIRECTIONAL

Values are representative of the ingredient class, based on published technical literature, and shown directionally for comparison. Final performance must be validated in the customer's formulation.
